## Policy of Replacement Parts

It is the current policy to only supply the FingerSaver as a finished and tested working tool. This policy is and will be reviewed as customer and user feedback is received.

The FingerSaver design does not currently allow suitable or safe assembly of replacement internal parts, as the whole internal element is assembled and pressed in one movement to its correct working position on an assembly jig. Once loaded the internal retention washer that sets the correct working tension of the tension strap is designed to lock itself in position permanently.

Whilst it is possible to remove a tension strap through the retention washer it is not recommended as excessive and unsafe force is required and we do not want a safety device becoming a potential source of injury. Additionally the force required will weaken and damage a replacement tension strap fitted this way.

We aim to listen to our customers and make sound and safe judgements from their feedback for their ongoing safety.

### Services & Products

CNC Waterjet & Knife Cut Gaskets & Profiles  
Rubber Moulding, Extrusion & Inflatable Seals  
Studbolts & Fasteners  
Machined Components

Certificate No. GB92/1026
